

MJ Logistics

Palwal, India

“Given the cost pressures in our logistics industry, when the opportunity came to develop a rooftop solar solution with Cleantech Solar and benefit from reduced energy bills, it made a lot of sense and I seized the opportunity. The customer response for our business has been extremely good and having a rooftop solar system helps us to differentiate and come out as pioneers in our industry.”

AMIT SARIN
CEO
MJ Logistics

Leading logistics provider reduces costs and enhances standing with key customers

MJ Logistics is a 3rd party logistic company (3PL) operating about 1million sqf of warehousing, cold storage and transportation across North India. They offer specialized very low temperature storage, including the largest cold storage facility in the State and also dry storage for prestigious customers.

After initial evaluation, MJ Logistics decided to opt for the Power Purchase Agreement model; but presented a challenging technical set of requirements with synchronization of the rooftop photovoltaic plant between grid and backup generators (DG).

The Cleantech Solar team designed and installed what is now one of the largest rooftop PV systems in the Delhi region (National Capital Region) in less than 90 days.

Not only is MJ Logistics saving close to INR 1,000,000/year USD15,000 but it received excellent feedback from its reference customer, Tata Motors.

All those were ample reasons why MJ Logistics will expand the relationship to other sites across the country.
